Eating disorders Key

1. low self-esteem 2. pressure to be skinny from society/family/friends
- 2, Because they see themselves overweight even though they might not be usually.
3. Similarities: both anorexia and Bulimia are mental conditions that cause a person to have a very distorted body image which causes them to starving themselves and going to extreme measures to lose weight

Differences: Bulimics usually binge eats and tries to puke it up afterwards which makes them not gain weight from the food, while anorexics go to extreme measures to starve themselves without binge eating.

4. Because it prevents them from gaining weight from the food and getting nutritions.
5. Binge eaters are almost always overweight, and it's possible for them to keep their illness a secret since many people are overweight.
